The Professional's Sampled Piano

KORG SG-1D
SAMPLING GRAND

NEW SG-1D
SAMPLING GRAND

So Much Truer to the Original—Because We Gave it So Much More Memory

By providing five times the memory capacity, we've given the New SG-1D astounding depth and resolution. You'll hear a richness previously unattained in a sampled piano. An extraordinary realism in both the "prompt sound" and the "aftersound." With the New SG-1D you also get 3-band EQ, brilliance control, digital chorus, full MIDI implementation and ROM card capabilities.

The Expressiveness You've Always Wanted

When you play the New SG-1D it responds to your touch exactly like a grand piano. Full sized keys and a true weighted action give you exceptional expressive control. You can even customize the keyboard's response over an 8-step range.

Fabulous Built-in Sounds and Add-on ROM Cards

Start with the internal full-bodied acoustic grand, acoustic upright, classic electric piano and bright electronic piano sounds. Add you choice of other pianos, harpsichords, guitars, marimbas and more via plug-in ROM memory cards. The library of inexpensive, interchangeable ROM cards keeps on growing.

First Choice as a Master MIDI System Controller

Why is the world's most expressive keyboard instrument the ideal MIDI system controller? Because the New SG-1D offers a full MIDI implementation including Velocity, Pitch Bend, Modulation, and Program Change. It even has Local Control On/Off and Programmable Split Point so you can play New SG-1D sounds independently from external instruments.
